## IN THE CLAIMS

1. (Original) A plasma etch process for selectively etching a layer of low-k dielectric material having a dielectric constant less than 4, comprising:

introducing into a plasma etch chamber, in which the layer of low-k dielectric material is situated, an etching gas mixture comprising a fluorine-rich fluorocarbon or hydrofluorocarbon gas, a nitrogen-containing gas, and a hydrogen-rich hydrofluorocarbon gas; and

maintaining a plasma of the etching gas mixture in the plasma etch chamber to etch the layer of low-k dielectric material.

- 2. (Original) The process of claim 1 wherein the fluorine-rich fluorocarbon gas is  $CF_4$ , the nitrogen-containing gas is  $N_2$ , and the hydrogen-rich hydrofluorocarbon gas is selected from the group consisting of  $CH_2F_2$ ,  $CH_3F$ , and mixtures thereof.
- 3. (Original) The process of claim 1 wherein the plasma of the etching gas mixture etches the low-k dielectric layer with an etch rate higher than about 4000 .ANG./min.
- 4. (Original) The process of claim 1 wherein the fluorine-rich fluorocarbon or hydrofluorocarbon gas is selected from the group consisting of  $CF_4$ ,  $C_2F_8$ ,  $CHF_3$ , and mixtures thereof.
- 5. (Original) The process of claim 1 wherein the nitrogen-containing gas is selected from the group consisting of N<sub>2</sub>, NH<sub>3</sub>, NF<sub>3</sub>, and mixtures thereof.
- 6. (Original) The process of claim 1 wherein the hydrogen-rich hydrofluorocarbon gas is selected from the group consisting of CH<sub>2</sub>F<sub>2</sub>, CH<sub>3</sub>F, and mixtures thereof.
- 7. (Original) The process of claim 1 wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or

hydrofluorocarbon gas at a first volumetric flow rate, the nitrogen-containing gas at a second volumetric flow rate, and a hydrogen-rich hydrofluorocarbon gas at a third volumetric flow rate, and wherein the ratio of the second volumetric flow rate to the first volumetric flow rate is about 1:4 to 2:1.

- 8. (Original) The process of claim 1 wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or hydrofluorocarbon gas at a first volumetric flow rate, the nitrogen-containing gas at a second volumetric flow rate, and a hydrogen-rich hydrofluorocarbon gas at a third volumetric flow rate, and wherein the ratio of the third volumetric flow rate to the first volumetric flow rate is about 1:3 to 1:1.
- 9. (Original) The process of claim 1 wherein the layer of low-k dielectric material is over a substrate placed on a pedestal in the plasma etch chamber, and maintaining a plasma of the etching gas mixture comprises capacitively coupling RF power into the plasma etch chamber such that a substantial DC bias exists between the pedestal and the plasma.
- 10. (Original) The process of clam 1 wherein the layer of low-k dielectric material is over a substrate placed on a pedestal in the plasma etch chamber, and maintaining a plasma of the etching gas mixture comprises:

applying a bias power to the pedestal; and

applying a source power to a top electrode facing the pedestal, wherein the source power has a frequency higher than a frequency of the bias power.

11. (Original) The process of claim 1 wherein maintaining a plasma of the etching gas mixture further comprises applying a slowly rotating magnetic field in the chamber.

- 12. (Original) The process of claim 1 wherein the etching gas mixture further comprises an inert gas selected from the group consisting of argon, helium, neon, xenon, and krypton.
- 13. (Original) The process of claim 12 wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or hydrofluorocarbon gas at a first volumetric flow rate, and the inert gas at a second volumetric flow rate, and wherein the ratio of the second volumetric flow rate to the first volumetric flow rate is about 20:1 to 50:1.
- 14. (Withdrawn) A computer readable medium storing therein program instructions that when executed by a computer causes an etch reactor to etch a layer of dielectric material having a dielectric constant less than 4.0, the program instructions comprising:

providing a substrate with the layer of low-k dielectric material thereon into a plasma etch chamber of the etch reactor;

introducing into the plasma etch chamber an etching gas mixture comprising a fluorine-rich fluorocarbon or hydrofluorocarbon gas, a nitrogen-containing gas, and a hydrogen-rich hydrofluorocarbon gas; and

striking a plasma of the etching gas mixture in the plasma etch chamber to etch the layer of low-k dielectric material.

- 15. (Withdrawn) The computer readable medium of claim 14 wherein the substrate is placed on a pedestal in the plasma etch chamber, and wherein striking a plasma of the etching gas mixture comprises capacitively coupling RF power into the plasma etch chamber such that a substantial DC bias exists between the pedestal and the plasma.
- 16. (Withdrawn) The computer readable medium of claim 14 wherein striking a plasma of the etching gas mixture comprises supplying a RF bias power to the pedestal and supplying a VHF power to a top electrode facing the pedestal.

17. (Withdrawn) A method for creating damascene or dual damascene structures, comprising:

introducing into a plasma etch chamber a substrate coated with a layer of low-k dielectric material having more than 8% carbon content;

introducing into the plasma etch chamber an etching gas mixture comprising a fluorine-rich fluorocarbon or hydrofluorocarbon gas, a nitrogen-containing gas, and one or more additive gases;

maintaining a plasma of the etching gas mixture in the plasma etch chamber to etch the layer of low-k dielectric material.

- 18. (Withdrawn) The method of claim 17 wherein the fluorine rich fluorocarbon gas is selected from the group consisting of  $CF_4$ ,  $C_2F_8$ ,  $CHF_3$ , and mixtures thereof.
- 19. (Withdrawn) The method of claim 17 wherein the additive gases include one of a hydrogen-rich hydrofluorocarbon gas, an inert gas, and a carbon-oxygen gas.
- 20. (Withdrawn) The method of claim 17 wherein the substrate is placed on a pedestal in the plasma etch chamber, and wherein maintaining a plasma of the etching gas mixture comprises supplying a RF bias power to the pedestal and supplying a VHF power to a top electrode facing the pedestal.
